

SYSTEM AND METHOD FOR ROUTING A TRADING ORDER

ABSTRACT OF THE DISCLOSURE

A system for routing a trading order to a market center comprises a memory and a processor. The memory stores a trading order specifying a trading product. The 5 processor determines a plurality of market center prices for the trading product, each market center price associated with at least one of a plurality of market centers. The processor selects one of the plurality of market centers based upon the determined market center 10 prices. The processor further determines a disclosure policy for the selected market center and routes the trading order to the selected market center according to the determined disclosure policy.
